

Zhihao Wang

Postdoctoral Researcher, University of Maryland

World Models | Scientific Machine Learning | Geospatial Computer Vision

zhwang0.github.io | Google Scholar | GitHub | LinkedIn

Education

University of Maryland, College Park	Ph.D., Geographical Sciences	2020–2026
The Ohio State University	M.A., Geography	2018–2020
University of Waterloo	B.E.S., Honours Geomatics; Minor in Computer Science	2016–2018
Wuhan University	B.E., Remote Sensing Science and Technology	2014–2018

Research Experience

First-author publications: NeurIPS (2, Datasets and Benchmarks), AAAI (1), and ACM SIGSPATIAL (2).

University of Maryland, College Park 2020–Present

Postdoctoral Researcher (Jun 2026–Present); Doctoral Researcher (2020–2026)

World Models & Scientific Machine Learning NeurIPS’25; SIGSPATIAL’23, ’26

- Developed an Earth-system world model for **interactive what-if simulations**, enabling users to edit ecosystem states and explore coupled responses; learned from simulator trajectories without manually annotated interventions and evaluated across six global regions.
- Built **Deep-ED** to accelerate the EDv3.0 process-based model, combining multi-scale temporal modeling and knowledge-guided partitioning to **reduce long-horizon error accumulation by ~62%**.
- Created **CarbonGlobe**, the first global ML-ready dataset for forest carbon dynamics, to enable standardized benchmarking of **land-system emulation**; released 40 years of data at 0.5° resolution and evaluation scenarios for long-horizon generalization under climate shift. *Code* | *Data*

Foundation Model Adaptation & Cost-Aware Evaluation 2024–2026

- Developed a **cost-aware framework** across **13 models and 8 datasets**, translating prediction errors into estimated reference-data costs at fixed statistical precision; revealed why F1 alone misses cost differences driven by precision–recall trade-offs and class prevalence, informing model selection for real-world applications.
- Showed how **early stopping and checkpoint selection** can mask geospatial foundation models’ capabilities and change model rankings; compared three fine-tuning settings, with extended training and final-checkpoint evaluation improving mean macro-F1 by up to **2.3 percentage points** over early stopping.

Computer Vision & Multimodal Model Routing NeurIPS’25; ICDM Workshops’25

- Developed **TreeFinder** to bridge the gap between coarse satellite monitoring and local drone surveys: an open segmentation benchmark covering **48 U.S. states and 23,000+ hectares** at 0.6 m for individual-tree mortality detection and geographic generalization. *Code* | *Data*
- Mentored an intern** to develop **MARS**, using multimodal foundation models to automatically select suitable segmentation experts and address uneven performance across geographic scenes.
- Produced 10-year deforestation maps from approximately **15 TB** of 4.7 m satellite imagery to assess fine-scale forest loss beyond the detail of conventional monitoring products (e.g., 30 m or 10 m).

Physics-Guided Fairness Learning AAAI’24

- Developed **SimFair** to address uneven geographic performance under distribution shift without target-region training labels; used physics-guided inverse modeling to reduce **error disparity by 73%** on average across nine spatial splits versus a feedforward baseline.

National Oceanic and Atmospheric Administration (NOAA) May 2021–Aug 2022

Graduate Research Assistant

- Built climatology for cloud-gap filling in the **operational NOAA-20 VIIRS Global Albedo** product; processed **3.5+ TB** of data with Python multiprocessing on a Linux cluster.

Technical Skills

Programming: Python, C/C++, SQL, MATLAB, R, JavaScript.

ML frameworks & methods: PyTorch, TensorFlow; world models, physics-guided learning, time-series forecasting, semantic segmentation, foundation-model evaluation, geographic generalization.

Data & research tools: Linux, parallel data processing, Git, Google Earth Engine, Google Cloud, ArcGIS.

Selected Honors

First Place (tie) , UCGIS Student Lightning Talk Award	2026
Outstanding Graduate Assistant Award , University of Maryland	2026
Scholar Award (travel) , NeurIPS	2025
Student Scholarship (travel) , AAAI	2024
Excellence in Graduate Research Award (Second Place) , University of Maryland Department of Geographical Sciences	2024
Travel Award , ACM SIGSPATIAL GIS Cup	2023
Third Place , ACM SIGSPATIAL GIS Cup	2022

Service & Research Leadership

- Organizing committee: IEEE BigData Cup 2026: AI Emulation Challenge; ACM SIGSPATIAL GeoIndustry workshop (2025, 2026).
- Program committee/reviewer: NeurIPS 2026; KDD (2025, 2026); AAAI 2026; ACM SIGSPATIAL (2025, 2026).
- Mentored three student researchers (2024, 2025). Instructor for Python Programming and Geocomputing, University of Maryland (2025).
